THE BRICK

Making ideas come to life.

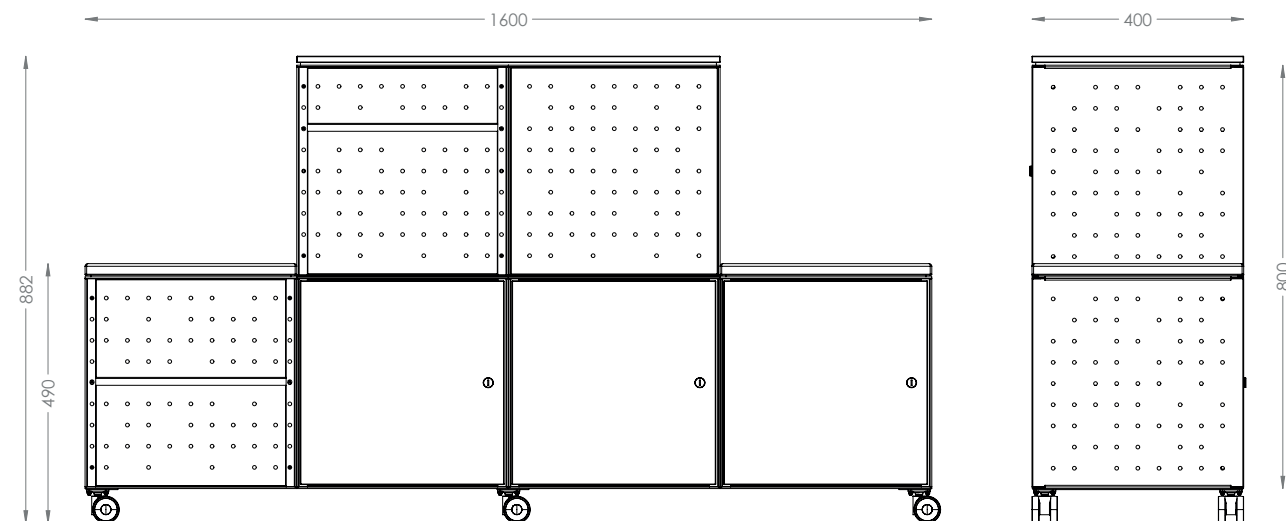

This is the true story of a good idea and how it came to life. It all began with two friends discussing how a simple furniture unit could be developed into a system with endless possibilities in both form and functionality. A design that inspired people through its obvious simplicity, without limiting the creativity of complex compositions, additional furniture elements, materials and colours.

The idea was transformed into a concept and the concept became real. Bricks was born and is now ready for you to challenge and compose. Welcome to the world of Bricks by Filosa.

Created to set your visions free.

As Bricks was detailed and developed, it quickly became clear that it could work in literally any interior context. And not only that – the two friends realised that they had created a dynamic system that could be recomposed endlessly. With this ability to edit, update and reconfigure, Bricks is perfect in today's dynamic organisations where interiors, locations, team structures and sizes are forever changing. Bricks can change with your needs and new visions and thereby keep its value.

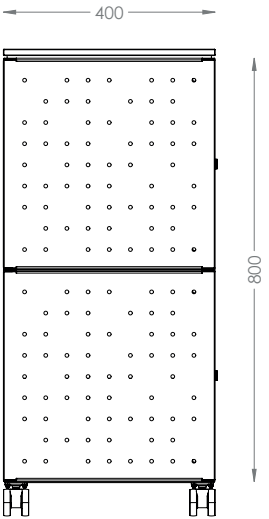

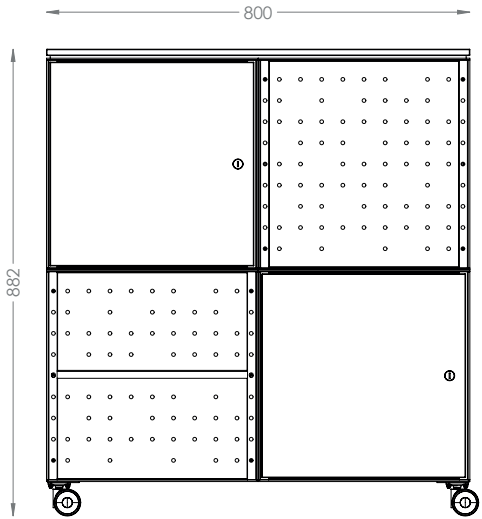

A sustainable new classic.

We read and hear about them every day: sustainability, resources and our suffering planet. The two friends found it both natural and necessary to address the environmental impact of a new product, well aware that without our planet, there is neither people nor profit.

They discussed what type of furniture people would use in the future and how they would use it, and realised that with Bricks they were able to deliver a sustainable solution: every part is replaceable and therefore perfect if renovation, change or a different type of component is needed. No need to buy new – fix it if broken, add or remove if needed, and let your Bricks system follow you throughout your life.

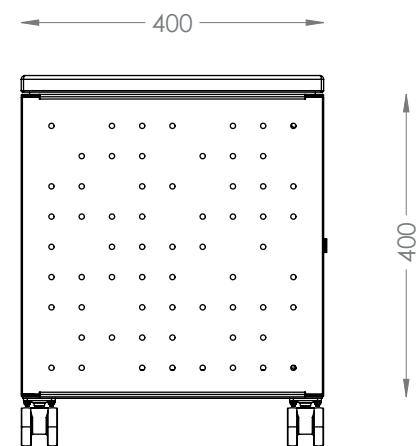

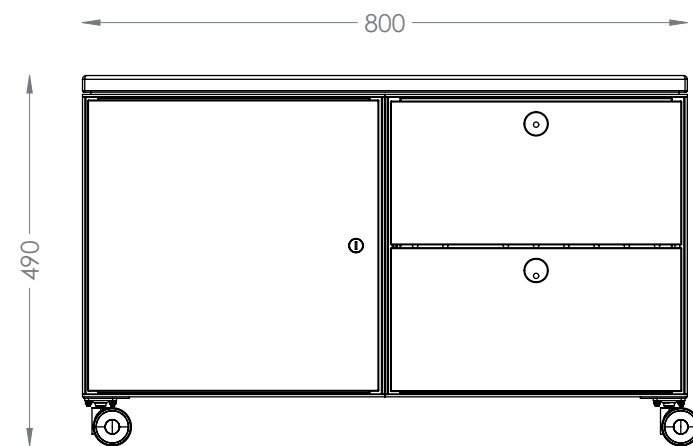

Design challenged by long-lasting quality.

Imagine Bricks or any other design a hundred years from now. Will it look modern, classic or outdated? Will it still serve its original function and be of value in future interiors? Obviously no one knows.

Bricks is designed and developed with materials that are long-lasting, pure, reusable and of the best quality. The design is based on simple geometric shapes and the system offers endless possibilities to compose, rebuild, extend, divide, repair, renovate and thereby adapt to changing contexts.

All designs are connected to their part in history – a memory to some and a new discovery to others – and only one thing is sure: good design and good quality will last and retain its value. Anything else will not.

Not just another day at the office.

Bricks is now part of the DNA of an interior system with its endless use, style and combination possibilities. It has become the three-dimensional, multifunctional and adaptable frame for life around it and thus also for additional furniture, supporting and complementing functional interior design. A range of smaller pieces of furniture and accessories – stools, cushions, sidetables, office chairs and desks – was designed to work around the Bricks system when used for office, school or home interiors, providing the exact functionality and daily flexibility required.

A natural part of the Bricks family.

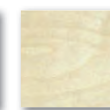

As the Bricks STEEL system developed, the need for another Bricks module appeared, and so Bricks WOOD was born. Same geometry, same DNA, same unlimited system possibilities and refined details – only now made in solid plywood, bringing a softer, more natural feel to the design.

Johanna Gullichsen

Bricks WOOD offers designers and interior architects the opportunity to collaborate with us as we did with Finnish textile designer Johanna Gullichsen. Her graphic patterns decorate Bricks WOOD, providing a unique identity when used as a laminated surface, a textile for seat upholstery or an acoustic element. We welcome your creativity and look forward to co-creating with you.

A BEAUTIFUL STOOL.

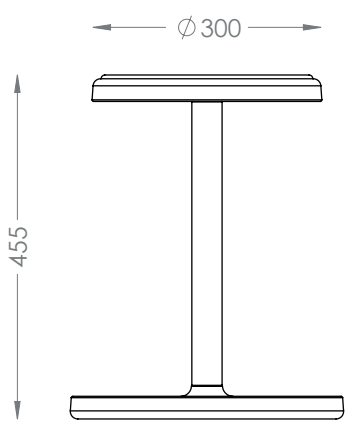

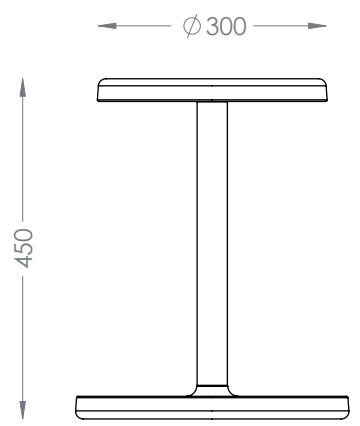

Love at first sight.

The FILOSA STOOL attracts with its simple, functional design and wonderful finish in steel and solid wood; a light, comfortable seat that is easy to handle and move around. Whether upholstered or not, the stool will quietly win your heart for both professional and private interiors.

LARS VEJEN

Award Winner

Danish Designer of the Year in 2018 and creator of the FILOSA System.

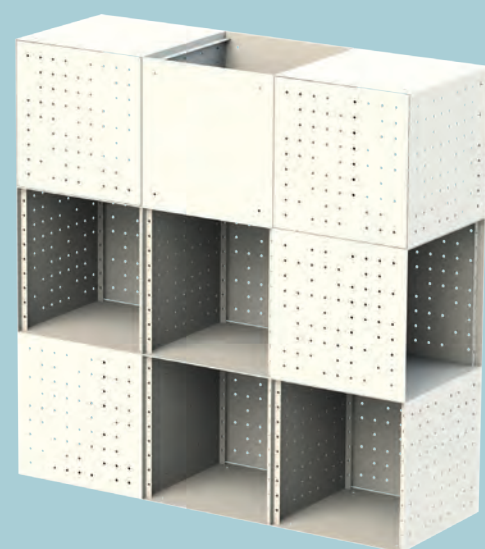

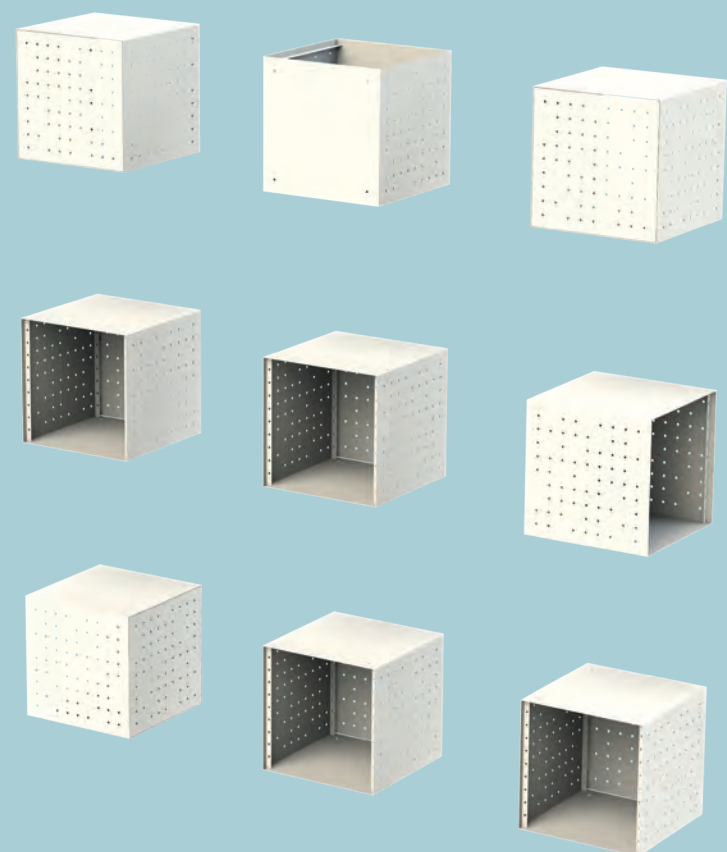

“My professional passion is very simple: I love finding and shaping good ideas! I use my background as an architect to extract the essence of a requirement. To see potential in the context of space, in architecture and in people, without whom none of it would make much sense. For me, great inspiration is found simply by living life! Seeing the way humans, things, shapes, nature, structures and elements interact. Knowledge gathered from years of experience with a wide range of very different professional partners gives me valuable insight and cross-references to enhance my creativity. I always get the same great pleasure from finding the right solution. Finding the balance.”

BRICKS modular furniture.

The BRICKS modular furniture system by FILOSA offers new ways of designing interior spaces. With the use of a simple cube as the basic element and almost endless possibilities in terms of combinations, colours and material finishes, BRICKS engages with both classic and modern architecture, traditional furnishing and new ways of thinking about interiors. It is designed with the intention of making interior furnishing easy and flexible to compose individually and to rearrange whilst being both functional and durable. The key words are form, function, individuality and flexibility.

The concept is based on a 40x40x40cm cube as the basic element. Thanks to the advanced simplicity of the cube, BRICKS offers endless possibilities for unique compositions, combinations and thereby completely individual installations. A wide range of accessories, including bench elements, table units, shelves, acoustic panels and castors, and the free choice of RAL colours and surface materials, makes the system adaptable to any functional need and interior context. Composed as a free-standing and multifunctional room divider, a simple locker unit, mobile seating or a break-out station, BRICKS is always based on the idea of combining storage with any other functional need and with the simple possibility to change, reuse, expand or divide into smaller units and different functionalities.

BRICKS is designed with the simplicity of the cube for the changing needs of modern organisations, enabling new ways of designing, using and experiencing interior spaces.

Not just a pretty surface.

FILOSA BRICKS is a visionary concept for the creation of modular furniture. Choose our suggestions or any RAL colour, laminate, veneer or fabric for upholstery and compose your own BRICKS installation.

RAL-COLORS

A wide selection of standard colors for the Bricks steel frame and other steel parts. All RAL-colours requested are available.

LAMINATES

We have picked up following laminates from Formica laminates as suggested colors. Any colors and laminates can be used by request. Edges of the laminated parts can be visible veneer edge or ABS-edge.

UPHOLSTERY

For upholsteries select your favourite fabric or leather and we will supply you the Bricks accordingly.

CASTERS OR LEGS?

Choose casters for mobile use of Bricks. Place legs for a stable and large set of Bricks.

veneers

Here are our standard veneers, although we can always use other veneers and any stain color by your request.

FINISHING OPTIONS:
- Lacquered
- Stained

Compositions.

The FILOSA concept is ready to challenge your creativity. Bricks adapts to basically any angular form, given its capability to connect in all directions of the cube, and with softer-shaped and free-standing furniture surrounding the Bricks composition, a delicate balance in form and function is achieved.
